

Hygiene

Clean solutions for use
in sensitive settings

Hygiene is a key factor in so many aspects of our lives. That includes our furniture, which we always view as part of an overall room set-up.

That is why we never stop working with and on behalf of our customers to improve our products – with high hygiene standards in mind. We meet the ever increasing requirements for hygiene, materials and handling in every way that we can. We think of everything from the tiniest of details like invisibly attached elements and disinfectant-resistant coatings to covers that are easy to remove. And the result is furniture that ticks all the boxes when it comes to hygiene. Furniture that is practical. Yet oozes elegance and effortless style.

Hygiene all the way. Safety in every furniture segment.

Here at Brunner, we never compromise on our high standards for the design and functionality of the contract furniture we offer. We provide custom-made solutions to respond to all requirements. To create inspiring settings. To improve quality of life outside of the home. And to comply with the most stringent of hygiene standards.

care

Hospitals, clinics and care homes

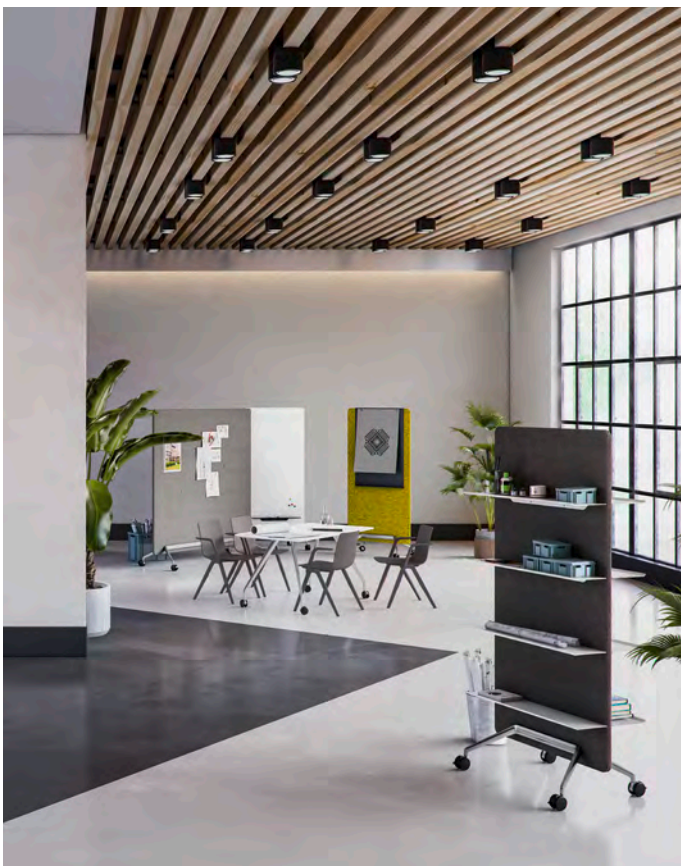

There is an increased risk of infection in care facilities. With that in mind, clean furniture solutions are essential in sensitive settings such as lounges, patient rooms and treatment rooms.

public space

Cafeterias, restaurants and hotels

Pathogens spread unbelievably quickly in public and crowded places, including hotel lobbies, airport lounges and museum restaurants. Surfaces in these settings need to be easy to clean and disinfectant-resistant.

office

Offices, conference rooms and coworking spaces

Flexible working spaces and meeting areas are great places to sit and think. But communication can be so much more relaxed if the furniture lives up to the necessary hygiene standards.

Our solutions.

Materials, fabrics and

designs.

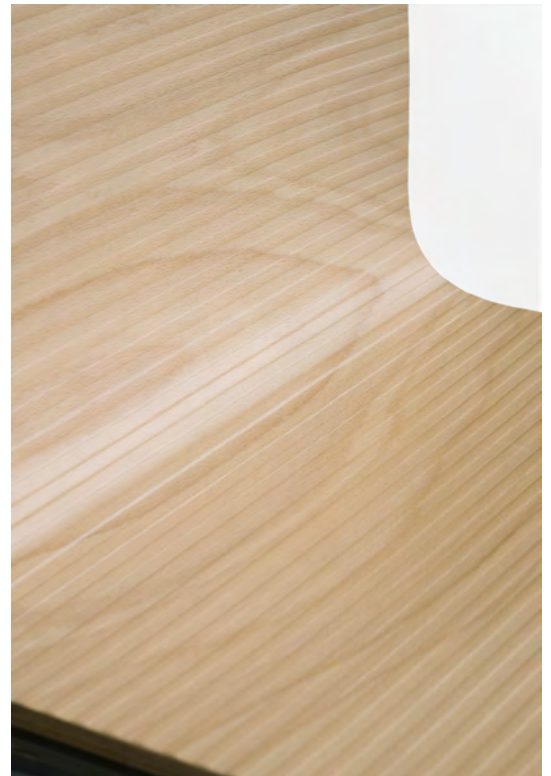

Given that bacteria, viruses and other microbes can live on surfaces for several months in some cases, we rely on disinfectant-resistant and robust surfaces. Non-porous materials keep liquids at bay.

METAL

Chromed surfaces that are easy to clean
Antibacterial powder coating

MATERIALS

WOOD

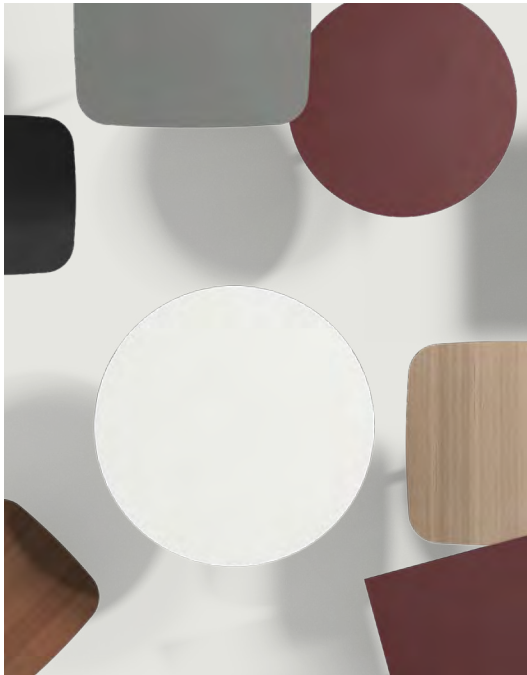

Surfaces sealed with water-based varnish
Beech used thanks to its antibacterial properties

NANOTEC BRUNNER

Antibacterial properties and resistance to scratches and wear and tear

HPL

Straightforward cleaning and extremely robust material

With a view to keeping up with hygiene requirements as they become more stringent going forward, we are committed to continually improving our furniture and materials. That's why our HPL table tops are now also available with an extra antibacterial finish.

PLASTIC

Robust material with resistance to disinfectant

HPL POLYREY

The antibacterial treatment with Sanitized® silver ions kills 99.9% of bacteria within the space of 24 hours and actually stops bacteria from forming in the first place.

The silver ions are encapsulated in tiny glass beads and activated when they come into contact with moisture. They neutralise bacteria on the surface and prevent cell division to stop them from spreading.

Antibacterial protection is provided for the furniture's entire lifespan.

Sanitized® silver ions do not contain any silver nanoparticles, making this an extremely safe option for people and our planet. Plus, unlike synthetic and organic antimicrobial substances, silver is a non-toxic molecule.

Sanitized certified antibacterial finish

FABRICS

We only ever use fabrics with special hygiene properties to guarantee maximum safety.

Our standard range includes a huge selection of fabrics that are extremely resistant to dirt and moisture. This includes functional fabrics that can be washed and are disinfectant-resistant like our easy-to-clean artificial leather, for example.

A special moisture protection membrane ensures evengreater hygiene by preventing moisture from penetrating the upholstery.

Many of our fabrics can be washed at up to 60°

Nicely concealed zips
for quick removal

Our furniture comes with upholstery and covers that are easy to remove, meaning it can still be used as normal during the regular deep-clean process provided that moisture protection is in place.

Covers are removed and attached using a clip so that no additional tools are needed.

SPECIAL DESIGNS

If it is hard for dirt to adhere, less cleaning is required. We create furniture with as few grooves, crevices and notches as possible.

In addition details from invisibly attached components and upholstery elements to outer edges and optional hygiene covers make cleaning easier.

To avoid joints where dirt can gather, upholstered chairs can be designed to have integrated upholstery rather than separate seat upholstery. Upholstered shells are much more hygienic and easier to clean.

Feature products.

All-rounders with maximum safety.

Our range includes product solutions for all settings where hygiene plays a key role, including cafeterias, patient rooms, seminar rooms and coworking spaces. And we even cater for indoor and outdoor use.

halm

TWO FROM THE SAME MOULD

- Seat and backrest made from premium polypropylene
- Virtually seamless design for added hygiene
- Robust material, easy to clean and a long lifespan

twin

LIGHTWEIGHT AND STABLE – FOR INDOOR AND OUTDOOR USE

- Monobloc plastic chair made from glass-fibre reinforced polypropylene
- Seat and backrest available as a solid structure or with a water-permeable mesh design
- Resistance to disinfectant and the weather

fina

COLOURFUL AND EASY TO CLEAN

- Innovative shaped wood shell with a sturdy, sleek and elegant design
- Optional plastic shell made from polypropylene with a glass-fibre reinforced core
- Ultimate hygiene and low maintenance

4less

ROBUST, DIVERSE AND READY TO RISE TO ANY OCCASION

- Antibacterial HPL Polyrey table top surface
- Extremely slimline chromed legs
- Design without visible traverse under-frame for ease of cleaning

3000

ELEGANT DESIGN, EASY TO CLEAN AND LOW MAINTENANCE

- Antibacterial HPL Polyrey table top surface
- Durable solid core table top for outdoor use
- Stainless steel column with special zinc undercoat and powder coating for maximum protection against the weather

team

Table displays and boards for added hygiene

- Protective screens with flexibility and a certain degree of mobility guaranteed
- Range of plexiglass versions that are easy to clean and have a non-porous surface that stops dirt from sticking
- Option of antibacterial HPL Polyrey table top surface

Cleaning and disinfection.

Proper care, maintenance

and hygiene information.

Proper cleaning and disinfection processes ensure that our premium furniture meets the highest of hygiene standards. Cleaning removes any visible dirt on the surface. Following that initial step with disinfection then reduces microbes by at least 84 to 99.9%.

Since every cleaning agent and disinfectant is different, we recommend referring to the manufacturer's instructions for use and always testing the suitability of the product on a concealed area first to avoid discolouration or abrasion.

As a general rule, disinfectant should be sprayed on and then wiped off. Be sure to use the correct amount of disinfectant and check that it is spread evenly over the surface. Using large amounts of disinfectant on isolated parts of the surface can cause permanent stains. Do not exceed a residence time of more than ten minutes.

Every different material needs to be cared for in a specific way, so be sure to read our separate cleaning and maintenance instructions.

If you have further questions or require more assistance, our service department at service@brunner-group.com will be only too happy to help. You can also find more information on our website (www.brunner-group.com) under the relevant product or under "[Products](#)", "[Materials and fabrics](#)" in our menu.
