*Statements about the burning behaviour are based exclusively on empirical values with comparable, previously tested combinations of materials. Since the burning behaviour of upholstery composites can vary, deviations with respect to the classification are possible. Test certificates are available for selected products upon request.

Note

For details, prices, terms and conditions, refer to the current price list. We reserve the right to make technical changes, errors and colour variations without prior notice. The aforementioned fire protection requirements are provided exclusively as example cases. The fire protection requirements for the building and the interior can vary depending on the project. Therefore, the furniture must be coordinated and tested in a project-specific manner in terms of equipment and in accordance with the building requirements on an individual basis. Some models are displayed as special versions that are subject to additional costs. Wood is a natural product. We exclusively use high-quality beech wood from sustainable forestry for our line of furniture. Despite our careful selection of wood, there may be variations in colour. Differences in colour and structure do not constitute grounds for complaint, but are an expression of the individual character of furniture made from wood.
